

Group Project Report Healthcare

Task assigned date: 01-10-2026

Task deadline date: 05-10-2026

Task completed date: 05-10-2026

This project was successfully completed by our team, consisting of Chendan RP, Anookya through effective collaboration and teamwork.

As part of a group project, I handled Business Understanding (Stage 1), Data Cleaning using Python (Stage 2), and Database Analysis using MySQL (Stage 4).

Challenges:

- Sorted unique values and filled missing data with mean and mode values.
- Cleaning and standardizing categorical data with spelling errors and inconsistent formats.
- Writing SQL queries to answer business-related questions and extract meaningful insights.
- The admission date and discharge date formats were converted into a consistent standard format.

Key Learnings:

- Gained practical experience in data preprocessing and cleaning using Python.
- Improved SQL querying skills for business analysis and reporting.
- Learned how to convert raw data into actionable business insights.
- Insurance coverage and Readmission flag values were converted from numeric codes into descriptive labels.
- Doctor rating and Hospital rating were converted from numeric scores (1 to 5) into descriptive categories such as Poor, Fair, Good, Very Good, and Excellent to improve data interpretation.
- In this group project, we actively shared ideas, collaborated on problem-solving, and supported each other throughout the project lifecycle.
